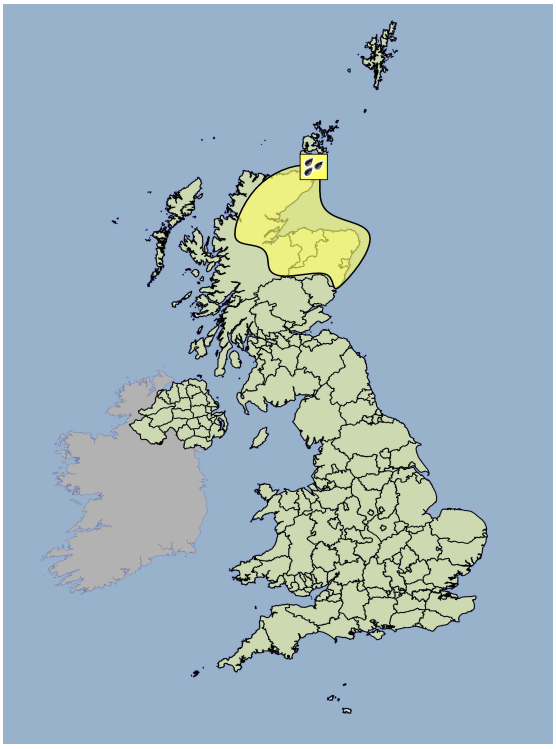
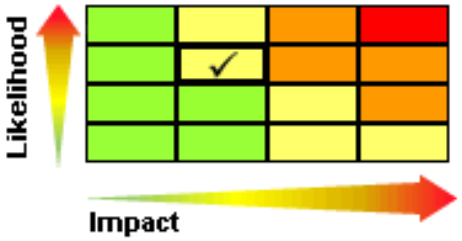
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal zone will become slow-moving across the north and northeast of Scotland through Tuesday. This will bring rain which will become heavy and often persistent from the early hours of Tuesday as an area of low pressure drifts northwestwards close to, or across northeast Scotland. The rain may continue into the early part of Wednesday although it should be easing by this time.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **02:00 on Tue, 07th Oct 2014** until **23:55 on Tue, 07th Oct 2014**

Periods of heavy rain will return to northern and northeastern Scotland during the early hours of Tuesday morning and become persistent across much of Grampian and north Highland during the day. Rainfall totals of around 30 mm will accumulate with perhaps 50 mm over some hillier districts, especially eastern Aberdeenshire, eastern Sutherland and neighbouring areas. Easterly gales will occur in the north of this area (please see separate wind warning).

The public should be aware that driving conditions will become hazardous with localised flooding and standing water.
